

Digital Analytics Case Study Brief

Assignment: Your Brand Case Study

Objective

You will create a **professional case study** based on your assigned brand, demonstrating how you used digital analytics to uncover insights and provide strategic recommendations.

What Your Case Study Should Do

Your case study should answer:

- What problem did the brand have?
- What data did you analyze?
- What did you discover?
- What do you recommend—and why does it matter?
- What did *you* specifically contribute?

Required Sections

1. Introduction / Brand Overview

Briefly introduce:

- The brand (mission, audience, purpose)
- Business goals (engagement, revenue, awareness, etc.)
- Why analytics was needed (ex: redesign, low engagement, unclear performance)

Think: set the stage

2. Problem Statement

Clearly define:

- What wasn't working?
- What questions needed answers?
- What challenges the brand faced

Example prompts:

- Where were users dropping off?
- Why was engagement low?
- What was unclear about their audience?

3. Your Process (Methodology)

Explain how you approached the analysis:

- Tools used (GA4, SEMrush, social analytics, etc.)
- What data you analyzed (traffic, engagement, acquisition, events)
- How you investigated the problem
- Your **individual role**

This section should show HOW you think

4. Key Findings (INSIGHTS + DATA)

This is the most important section.

Include:

- Specific insights (NOT general statements)
- Data-backed observations
- Patterns, trends, and issues

You must include visuals:

- GA4 screenshots
- Traffic or engagement charts
- Social media performance data
- Funnel or drop-off examples

For each insight:

- What did you see?
- Why does it matter?

5. Recommendations / Solutions

Provide clear, actionable solutions:

Structure them like this:

- High Priority (immediate fixes)
- Medium Priority (optimization)
- Long-Term (strategy)

Each recommendation should:

- Directly connect to a finding
- Explain expected impact

6. Your Individual Contribution

Be explicit:

- What did YOU analyze?
- What insights did YOU uncover?
- What decisions did YOU influence?

Use “I” statements here

7. Conclusion & Reflection

Wrap it up with:

- What you learned
- What surprised you
- What the brand should do next
- How this project improved your analytics skills

Visual Requirements

Your case study must include:

- At least **3–5 data visuals**
- Clear captions or explanations
- Evidence of analysis (not decoration)

Case Study Rubric

1. Structure (4 points)

- 4 = Fully developed with all required sections
- 3 = Mostly complete, minor gaps
- 2 = Missing key sections
- 1 = Incomplete / outline only

2. Storytelling & Clarity (4 points)

- 4 = Clear, compelling narrative with logical flow
- 3 = Mostly clear, some sections need depth
- 2 = Disjointed or unclear
- 1 = Lacks narrative structure

3. Data & Insights (4 points)

- 4 = Strong, specific insights supported by data & visuals
- 3 = Some insights, limited depth or specificity
- 2 = General observations, little data support
- 1 = No real insights

4. Recommendations (4 points)

- 4 = Strategic, actionable, clearly tied to findings
- 3 = Relevant but not fully developed
- 2 = Weak or loosely connected
- 1 = Missing or unclear

5. Individual Contribution (2 points)

- 2 = Clearly defined and specific
- 1 = Vague or minimal

6. Visuals & Presentation (2 points)

- 2 = Strong use of visuals, clean and professional
- 1 = Limited or unclear visuals

Key Reminder

A strong case study is NOT:

- A summary
- A list of tasks
- A team description

A strong case study IS:

- A **story**
- Backed by **data**
- Showing **your thinking and impact**
